

## Our SIP Trunking Bundles make it easy for partners and customers to order the services that best meet their needs.

SIP Trunking is delivered via an Internet connection. Customers can either use their own high quality Internet connections or purchase Quality of Service-enabled Internet or MPLS connections from NHC.

Customers with IP-PBXs can directly connect their phone systems to the Internet; those with traditional phone systems will use a gateway device. (The latter approach enables customers to use their current equipment without costly capital upgrades.)

**OPTION 1** **newVoice Basic SIP Trunking Bundles** combine the most popular services for businesses who use SIP for their in-house PBX systems:
